Andrea de Candia

Product Engineer

Accelerating product delivery through multi-agent orchestration and AI development harnesses.

EDUCATION

Rutgers University

Bachelor of Economics

Bachelor of Political Science

Advanced math and statistical modeling with completed engineering core requirements

PRODUCTS

- GameTsunami
- Weatherie
- Cruffled
- Audio Tales
- Square Swaps

WORK EXPERIENCE

Product Engineer — *Advection Software, LLC* — 2023 - Present

FULL-STACK PRODUCT ENGINEERING

Direct concurrent AI agents across custom remote gateways to ship features in parallel.
Wrap AI agents in headless execution harnesses to autonomously build and verify code.
Architect portable, node-based knowledge networks for decentralized agent context.
Deliver and maintain numerous products from concept to release on iOS, Android, and web.
Build user-facing AI engines synthesizing dynamic media, software, and rich metadata.

Agent Orchestration | MCP | AI Harnesses | Playwright | Context Engineering | GCP

Software Engineer — *Mesa Cloud, Inc.* — 2022 - 2023

DATA INFRASTRUCTURE ENGINEERING

Architected configurable ETL microservices processing millions of student records.
Parallelized monolithic workflows using asynchronous workers for horizontal scaling.
Orchestrated scalable environments with Elastic Beanstalk and network policies.
Developed data anonymization pipelines to capture production edge cases for CI.

Python | FastAPI | PostgreSQL | SQL | numpy | pandas | AWS

Staff Software Engineer — *Intellisense.io* — 2020 - 2022

INDUSTRIAL SYSTEMS ENGINEERING

Developed asynchronous services to bridge industrial site events with predictive models.
Wrote library for volumetric composition transformations across disparate spatial models.
Led technical planning and roadmap delivery with internal and external stakeholders.
Managed containerized artifact delivery and technical synchronizations with client teams.

Node.js | Docker | Python | Plotly | Kubernetes | Azure

Full Stack Engineer — *Giesecke + Devrient* — 2018 - 2020

SECURE MOBILITY PLATFORMS

Developed microservices to orchestrate high-volume telecom message delivery.
Architected custom BDD frameworks with proprietary registry and reporting integrations.
Led development of vehicle HMI prototypes for secure mobility showcased at MWC 2019.
Co-developed hardware-integration library for biometric vehicle authentication.

Java | Spring | Angular | Cucumber | Selenium | CI/CD | Android

Junior Software Developer — *Aplicaciones En Informática Avanzada* — 2018

APPLIED DATA SYSTEMS

Architected containerized services to orchestrate and deploy predictive model runs.
Developed data extrapolation logic to map user configurations to model inputs.
Built UI systems and automated document generation for bioscience analytics tools.
Designed reusable visualization components for application UIs and data reporting.

Python | Django | Docker | numpy | pandas | Java | JSP | D3 | Plotly

Senior Mutual Fund Accountant — *Alps Fund Services, Inc* — 2012 - 2015

Reconciled daily activity for daily mutual fund NAV calculations.
Implemented automated workflows for Bloomberg terminal-driven operations.
